The International Prostate Symptom Score (I-PSS) is based on the answers to 7 questions concerning urinary symptoms. Each question allows the patient to choose 1 of 6 answers indicating increasing severity of the particular symptom. The answers are assigned points from 0 to 5. The total score can therefore range from 0 to 35 (asymptomatic to very symptomatic).

The International Scientific Committee notes that physicians who counsel men with lower urinary tract symptoms (LUTS) use these measures not only during the initial interview but also during and after treatment in order to monitor treatment response.

The International Scientific Committee, under the patronage of the World Health Organization (WHO) and the International Union Against Cancer (UICC), has agreed to use the symptom index for BPH, which has been developed by the American Urological Association (AUA) Measurement Committee, as the symptoms assessment tool for patients.³
